

# DeskDoodle

Take Charge Of Your Screen!

## what is it?

DeskDoodle is an application that allows you to draw directly onto your screen. Take notes, stamp pictures, use it for presentations, and much more!

To install DeskDoodle, simply copy it to your hard drive.

## modes

DeskDoodle supports three different modes.

### **Edit mode**

The drawing is brought to the front and you can use the varying editing tools (accessible from the drop down menu) to modify it.

### **Above mode**

The drawing floats above your desktop - but you can still use your computer as if it were not there. This is useful if you want to view notes or pictures while using your computer.

### **Under mode**

DeskDoodle appears on top of your desktop background, yet below the icons. Use this mode if you want to view your drawing only when the desktop is visible.

## tools

Draw anything, anywhere on your screen with different colors and sizes.

Stamp any image from your hard drive onto your screen

Type anywhere, in any font, color, or size.

The next best thing to not making a mistake in the first place.

## tips

- **Command-Option-Enter will toggle modes regardless of what application you are using!**
- **You can hide the application and your drawing will still be there when you show it.**
- **Everything is saved when you quit, and restored the next time you launch.**
- **Use the color picker to choose from 16 million colors to draw or type in.**
